

We are excited to announce that as of August 31st Krause Power Engineering has officially become a part of Electric Power Systems Engineering and Design (EPS E&D,) an affiliated company of Electric Power Systems (EPS).

Krause Power Engineering began its professional practice 16 years ago and we appreciate that you have continued to choose us for trusted advice and efficient effective power system solutions. Longstanding customer relationships are something we share with EPS and we are confident that this change will lead to even better service opportunities. By joining forces, we can now access more tools and resources expanding our expertise and available staff to support your needs.

We are proud to be joining one of the largest and fastest growing companies in the independent testing and engineering industry. Since 1977, EPS has been dedicated to providing safe and reliable testing and engineering services for utilities, data centers, and industrial, transit and commercial facilities. They are a full member of the International Electrical Testing Association (NETA) providing services nationwide with local offices in Green Bay, Wisconsin (formerly Energis High Voltage Resources); Minneapolis, Minnesota; and Des Moines, Iowa.

While we are experiencing some changes over the next few months we aren't going anywhere. EPS shares our values of exceptional service, innovative solutions, and client-first relationships. This means we will still be doing the same quality work we've always done and will continue to work with you to deliver technically sound, cost effective, and operable solutions.
